# Blepharoplasty

Eyelid surgery

## Price list

### Upper Eyelids

#### UPPER EYELIDS.

**R16 000**

**Purpose:** Removes excess skin, fat and sometimes muscle to correct drooping or hooded eyes

**INCLUDEDS:** 64 units of Toxin

### Lower Eyelids

#### LOWER EYELIDS.

**R16 000**

**Purpose:** Reduces under eye bags and tightens loose skin.

**INCLUDEDS:** 64 units of Toxin

#### WHAT IS BLEPHAROPLASTY

A procedure to remove excess skin, fat, or muscle from the upper and/or lower eyelids, reducing sagging, puffiness, and tired-looking eyes for a more youthful, refreshed appearance. Performed under local anaesthesia and/or conscious sedation.

Small incisions made in natural eyelid creases or below the lash line.

Excess skin and fat are removed or repositioned. Minimal scarring, with a procedure time of 60-90 minutes.

#### RECOVERY AND DOWNTIME

First few days: Swelling and bruising peak around 48 hours, then improves. Cold compression helps. 1 Week: Most swelling/bruising subsides; sutures removed (if applicable) 2 Weeks: Patients usually return to work/social activities. 4-6 Weeks: Final Results become visible as scars fade.
