HART AESTHETICS

## BLEPHAROPLASTY

*Eyelid surgery*

### UPPER EYELIDS

**Purpose:** Removes excess skin, fat and sometimes muscle to correct drooping or hooded eyes

R16 000

**INCLUDES:** 64 units of Toxin

### LOWER EYELIDS

**Purpose:** Reduces under eye bags and tightens loose skin

R16 000

**INCLUDES:** 64 units of Toxin

### WHAT IS BLEPHAROPLASTY

A procedure to remove excess skin, fat, or muscle from the upper and/or lower eyelids, reducing sagging, puffiness, and tired-looking eyes for a more youthful, refreshed appearance. Performed under local anaesthesia and/or conscious sedation. Small incisions made in natural eyelid creases or below the lash line. Excess skin and fat are removed or repositioned. Minimal scarring, with a procedure time of 60-90 minutes.

### RECOVERY AND DOWNTIME

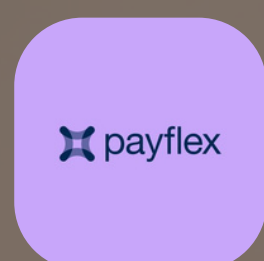

**First Few days:** Swelling and bruising peak around 48 hours, then improves. Cold compression helps. 1 Week: Most swelling/bruising subsides; sutures removed (if applicable)

**2 Weeks:** Patients usually return to work/social activities.

**4-6 Weeks:** Final Results become visible as scars fade.

### Payment Options Available
